The test report was prepared by Shenzhen BATT Testing Technology Co., Ltd. and found compliance with the requirements set forth in the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

### 3.0 Technical Details

#### 3.1 Summary of test results

**The EUT has been tested according to the following specifications:**

| Standard        | Test Type                   | Result | Notes           |
|-----------------|-----------------------------|--------|-----------------|
| FCC Part 15.207 | Conducted Emission          | Pass   | <b>Complies</b> |
| FCC Part 95.639 | Maximum Transmitter Power   | Pass   | <b>Complies</b> |
| FCC Part 95.637 | Modulation Characteristic   | Pass   | <b>Complies</b> |
| FCC Part 95.633 | Occupied Bandwidth          | Pass   | <b>Complies</b> |
| FCC Part 95.633 | Emission Mask               | Pass   | <b>Complies</b> |
| FCC Part 95.626 | Frequency Tolerance         | Pass   | <b>Complies</b> |
| FCC Part 95.635 | Spurious Radiated Emissions | Pass   | <b>Complies</b> |

### 4.0 Test LAB Details

All Tests Performed at

Name: Shenzhen Emtex Co., Ltd.

Address: Bldg. 69, Majialong Industry Zone,,Nanshan District,Shenzhen, Guangdong, 518052China

FCC Registration Number: 406365

## 5. Power Line Conducted Emission Test

### 5.1 Schematics of the test

EUT: Equipment Under Test

### 5.2 Test Method and test Procedure

The EUT was tested according to ANSI C63.4-2003. The Frequency spectrum From 0.15MHz to 30MHz was investigated. The LISN used was 50ohm/50uH as specified by section 5.1 of ANSI C63.4 –2003.

Test Voltage: 120V~, 60Hz

Block diagram of Test setup

### 5.3 Configuration of The EUT

The EUT was configured according to ANSI C63.4-2003. All interface ports were connected to the appropriate peripherals. All peripherals and cables are listed below.

One channels are provided to the EUT

#### A. EUT

| Device                         | Manufacturer                                      | Model | FCC ID      |
|--------------------------------|---|-------|-------------|
| 3 channel FM wireless intercom | Guangdong Samzuk Technology Development Co., Ltd. | AF333 | 2AAYF-AF333 |

## B. Internal Device

| Device | Manufacturer | Model | FCC ID/DOC |
|--------|--------------|-------|------------|
| N/A    |              |       |            |

## C. Peripherals

| Device | Manufacturer | Model | FCC ID/DOC | Cable |
|--------|--------------|-------|------------|-------|
| N/A    |              |       |            |       |

## 5.4 EUT Operating Condition

Operating condition is according to ANSI C63.4 -2003

A Setup the EUT and simulators as shown on follow

B Enable AF signal and confirm EUT active to normal condition

## 5.5 Power line conducted Emission Limit according to Paragraph 15.207

| Frequency(MHz) | Class A Limits (dB $\mu$ V) |               | Class B Limits (dB $\mu$ V) |               |
|----------------|-----------------------------|---------------|-----------------------------|---------------|
|                | Quasi-peak Level            | Average Level | Quasi-peak Level            | Average Level |
| 0.15 ~ 0.50    | 79.0                        | 66.0          | 66.0~56.0*                  | 56.0~46.0*    |
| 0.50 ~ 5.00    | 73.0                        | 60.0          | 56.0                        | 46.0          |
| 5.00 ~ 30.00   | 73.0                        | 60.0          | 60.0                        | 50.0          |

- Notes: 1. \*Decreasing linearly with logarithm of frequency.  
2. The tighter limit shall apply at the transition frequencies

## 5.6 Test Results

The frequency spectrum from 0.15MHz to 30MHz was investigated. All reading are quasi-peak values with a resolution bandwidth of 9kHz.

# **A Conducted Emission on Line Terminal of the power line (150kHz to 30MHz)**

EUT set Condition: Charging

**Results: Pass**

## **6. Frequency Tolerance**

### **6.1 Applicable standard**

According to FCC §2.1055(a) (1), the frequency stability shall be measured with variation of ambient temperature from  $-30^{\circ}\text{C}$  to  $+50^{\circ}\text{C}$ , and according to FCC 2.1055(d) (2), the frequency stability shall be measured with reducing primary supply voltage to the battery operating end point which is specified by the manufacturer.

According to FCC §95.626(b), Each FRS Unit must be maintained within a frequency tolerance of 0.00025 % ( 2.5 ppm).

### **6.2 Measurement Procedure**

#### **6.2.1 Frequency stability versus environmental temperature**

1. Setup the configuration per figure 1 for frequencies measurement inside an environment chamber, Install new battery in the EUT.
2. Turn on EUT and set SA center frequency to the EUT radiated frequency. Set SA Resolution Bandwidth to 1KHz and Video Resolution Bandwidth to 1KHz and Frequency Span to 50KHz. Record this frequency as reference frequency.
3. Set the temperature of chamber to  $50^{\circ}\text{C}$ . Allow sufficient time (approximately 30 min) for the temperature of the chamber to stabilize. While maintaining a constant temperature inside the chamber, turn the EUT on and measure the EUT operating frequency.
4. Repeat step 2 with a  $10^{\circ}\text{C}$  decreased per stage until the lowest temperature  $-30^{\circ}\text{C}$  is measured, record all measured frequencies on each temperature step.

#### **6.2.2 Frequency stability versus input voltage**

1. Setup the configuration per figure 1 for frequencies measured at temperature if it is within  $15^{\circ}\text{C}$  to  $25^{\circ}\text{C}$ . Otherwise, an environment chamber set for a temperature of  $20^{\circ}\text{C}$  shall be used.
2. Set SA center frequency to the EUT radiated frequency. Set SA Resolution Bandwidth to 1 KHz and Video Resolution Bandwidth to 1KHz. Record this frequency as reference frequency.
3. Supply the EUT primary voltage at the operating end point which is specified by manufacturer and record the frequency.

### 6.3 TEST SETUP BLOCK DIAGRAM

Figure 1

### 6.5 TEST RESULT

(1) Frequency stability versus input voltage (The end point voltage is 4.5V)

| Channel | Power Supplied (Vdc) | Frequency Measured (MHz) | Frequency Deviation (ppm) | Nominal Frequency | Limit (ppm) |
|---------|----------------------|--------------------------|---------------------------|-------------------|-------------|
| CH1     | 4.5V                 | 462.562316               | -0.40                     | 462.5625MHz       | ±2.5        |

(2)Frequency stability versus ambient temperature

**Test Results****CH1**

| Environment Temperature(℃) | Power Supplied (Vdc) | Frequency Measured (MHz) | Frequency Deviation (ppm) | Nominal Frequency | Limit(ppm) |
|----------------------------|----------------------|--------------------------|---------------------------|-------------------|------------|

## 7. EMISSION BANDWIDTH and Mask

### 7.1 PROVISIONS APPLICABLE

Per FCC §2.1049 and FCC §95.633(a) (c), the authorized bandwidth for emission type F3E or F2D transmitted by an FRS Unit is 12.5 kHz.

(1) At least 25 dB (decibels) on any frequency removed from the center of the authorized bandwidth by more than 50% up to and including 100% of the authorized bandwidth.

(3) At least 35 dB on any frequency removed from the center of the authorized bandwidth by more than 100% up to and including 250% of the authorized bandwidth.

(7) At least  $43 + 10 \log_{10}(T)$  dB on any frequency removed from the center of the authorized bandwidth by more than 250%.

### 7.2 MEASUREMENT PROCEDURE

TIA-603-C, section 2.2.11

### 7.3 Test Setup Block Diagram

### 7.4 Measurement Result:

| Bandwidth           |           |         |        |

## **8. UNWANTED RADIATION**

### **8.1 PROVISIONS APPLICABLE**

FCC §2.1053 and §95.635

### **8.2 MEASUREMENT PROCEDURE (Radiated Emissions)**

- (1). On a test site, the EUT shall be placed on a turntable, and in the position closest to the normal use as declared by the user.
- (2). The test antenna shall be oriented initially for vertical polarization located 3m from the EUT to correspond to the transmitter.
- (3). The output of the antenna shall be connected to the measuring receiver and either a peak or quasi-peak detector was used for the measurement as indicated on the report. The detector selection is based on how close the emission level was approaching the limit.
- (4). The transmitter shall be switched on; if possible, without the modulation and the measurement receiver shall be tuned to the frequency of the transmitter under test.
- (5). The test antenna shall be raised and lowered through the specified range of height until the measuring receiver detects a maximum signal level.
- (6). The transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
- (7). The test antenna shall be raised and lowered again through the specified range of height until the measuring receiver detects a maximum signal level.
- (8). The maximum signal level detected by the measuring receiver shall be noted.
- (9). The measurement shall be repeated with the test antenna set to horizontal polarization.
- (10). Replace the antenna with a proper Antenna (substitution antenna).
- (11). The substitution antenna shall be oriented for vertical polarization and, if necessary, the length of the substitution antenna shall be adjusted to correspond to the frequency of transmitting.
- (12). The substitution antenna shall be connected to a calibrated signal generator.
- (13). If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
- (14). The test antenna shall be raised and lowered through the specified range of the height to ensure that the maximum signal is received.
- (15). The input signal to substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuation setting of the measuring receiver.
- (16). The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
- (17). The measurement shall be repeated with the test antenna and the substitution antenna oriented for horizontal polarization.

### 8.3 Substitution Method: (Radiated Emissions)

#### Radiated Below 1GHz

#### Radiated Above 1 GHz

**8.4 MEASUREMENT RESULTS:**

Calculation: Limit (dBm)= EL-43-10log<sub>10</sub> (T)=-13dBm

Notes: EL is the emission level of the Output Power expressed in dBm, in this application, the EL is 27 dBm

## CH1

| Frequency<br>(MHz) | Antennal<br>Polarity | Emission<br>(dBm) | Limit<br>(dBm) |
|--------------------|----------------------|-------------------|----------------|
| 925.125            | Vertical             | -34.18            | -13            |
| 1387.6875          | Vertical             | -40.35            | -13            |
| 1850.25            | Vertical             | -44.85            | -13            |
| 925.125            | Horizontal           | -38.15            | -13            |
| 1387.6875          | Horizontal           | -46.38            | -13            |

**Note:** ERP was recorded.

## **9. Modulation Characteristics**

### **9.1 PROVISIONS APPLICABLE**

According to CFR 47 section 2.1047(a), for Voice Modulation Communication Equipment, the frequency response of the audio modulation circuit over a range of 100 to 5000Hz shall be measured.

Part95.637: A FRS unit that transmits emission type F3E must not exceed a peak frequency deviation of plus or minus 2.5 kHz, and the audio frequency response must not exceed 3.125 kHz

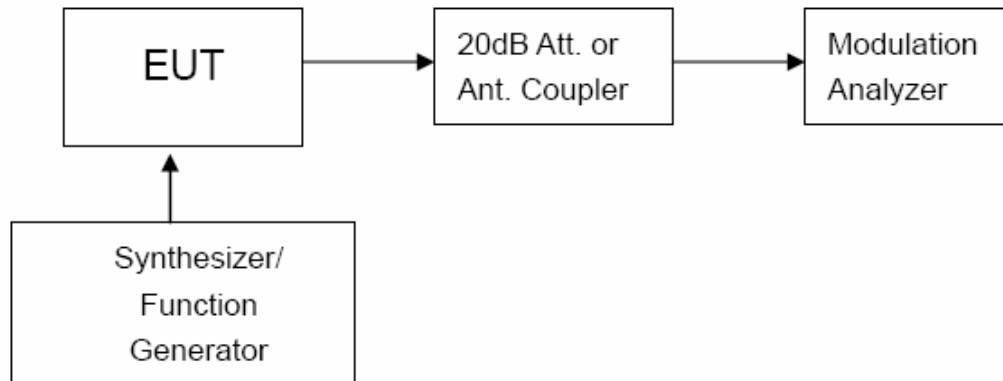

### **9.2 MEASUREMENT METHOD**

#### **9.2.1 Modulation Limit**

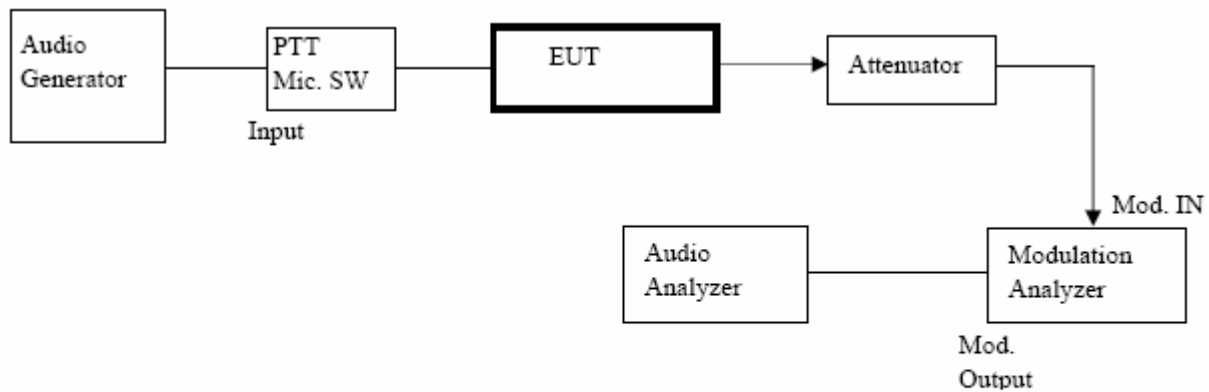

- (1). Configure the EUT as shown in figure 1, adjust the audio input for 60% of rated system deviation at 1KHz using this level as a reference (0dB) and vary the input level from -20 to +20dB. Record the frequency deviation obtained as a function of the input level.
- (2). Repeat step 1 with input frequency changing to 300, 1000, 1500 and 3000Hz in sequence.

#### **9.2.2 Audio Frequency Response**

- (1). The EUT and test equipment were set up as shown in figure 2.
- (2). Adjust the Modulation Analyzer for the following setting:
  - a) High-pass filter : off
  - b) Low-pass filter : 15 kHz
  - c) Detector : positive peak
  - d) Function : FM
- (3). The audio signal input was adjusted to obtain 20 % modulation at 1 kHz, and this point was taken as the 0 dB reference level.
- (4). With input levels held constant and below limiting at all frequencies, the audio signal generator was varied from 300 Hz to 5 kHz.
- (5). The response in dB relative to 1 kHz was then measured, using the Modulation Analyzer.

**Figure 1: Modulation characteristic measurement configuration**

**Figure 2: Audio Frequency Response Measurement Configure**

## 9.4 MEASUREMENT RESULT

### (a). Modulation Limit:

#### CH1

| Modulation Level (dB) | Peak Freq. Deviation At 300 Hz | Peak Freq. Deviation At 1000 Hz | Peak Freq. Deviation At 1500 Hz | Peak Freq. Deviation At 3000 Hz |
|-----------------------|--------------------------------|---------------------------------|---------------------------------|---------------------------------|
| -20                   | 0.06                           | 0.11                            | 0.17                            | 0.25                            |
| -15                   | 0.09                           | 0.3                             | 0.33                            | 0.37                            |
| -10                   | 0.1                            | 0.59                            | 0.62                            | 0.49                            |
| -5                    | 0.16                           | 0.99                            | 0.91                            | 0.76                            |
| 0                     | 0.28                           | 1.38                            | 1.47                            | 1.12                            |

| 10                    | 0.58                           | 1.91                            | 1.77                            | 1.5                             |
| 15                    | 0.66                           | 2.01                            | 1.89                            | 1.56                            |
| 20                    | 0.82                           | 2.12                            | 2.03                            | 1.68                            |

**(b). Audio Frequency Response:**

## 10. MAXIMUM TRANSMITTER POWER

### 10.1 PROVISIONS APPLICABLE

Per FCC §2.1046 and §95.639(d), No FRS Unit, under any condition of modulation, shall exceed a 0.5 W effective radiated power (ERP).

### 10.2 TEST PROCEDURE

The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load, which was also placed on the turntable.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis. Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the emissions were measured by the substitution.

### 10.3 TEST RESULT

| Power Measurement Results |                          |
|---------------------------|--------------------------|
| Channel                   | Measurement Result (dBm) |
| CH1 (462.5625MHz)         | 23.70                    |

Note: ERP was recorded.

## **11. Radiated Emission on Receiving Mode**

### **11.1 Provisions Applicable**

FCC Part 15 Subpart B Section 15.109

### **11.2 TEST METHOD**

ANSI C 63.4: 2003

### **11.4 MEASURE RESULT (MEASURED AT 3M USING FCC PART15 B LIMITS)**

## A Radiated Disturbance In Vertical (30MHz----1000MHz)
